This recent imprint by Signature Books contains fifteen essays which critically examine aspects of the standard works of the LDS and RLDS scriptural canon. Each author has paid attention to the cultural and environmental setting for the creation of the “written word of God.” In the words of the editor, the essayists are convinced that “the essential requirement for interpretation for a text is to read it in context” because “the written word of God does not come to us direct but through human intermediaries” (viii). Therefore, each essay employs or exhorts the use of scholarly, historical-critical tools to illuminate “the problem of the human and the divine in scripture” (ix). These convictions accord well with the collection’s explicit program: to “challenge . . . simplistic assumptions about the nature of revelation” in order to arrive at a “more refined . . . definition of revelation and scripture” (ix).

This program of confrontation and refinement fails to succeed fully, however, due to numerous difficulties in the use of historical and literary tools and sources in reasoning and theology. In addition, two principal assumptions woven throughout The Word of God—that LDS and RLDS are scriptural literalists and that Joseph Smith was the author of the latter-day scriptural canon—are not well served by the collection’s shortcomings (to be discussed below).

Nevertheless, The Word of God has its achievements and insights. In particular, James Lancaster’s and Kevin Barney’s essays stand out in this collection that favors the concise examination of a particular text or event. Both essays encourage the reader to sympathetically encounter either eyewitness reports of the media and settings for the Book of Mormon translation (Lancaster) or the Joseph Smith Translation of the Bible as a
midrash, or commentary, rather than a "literal restoration" (157) of lost original manuscripts (Barney).

Another important contribution, made by Melodie Moench Charles and others, underlines those tendentious interpretations of the Hebrew Bible made by modern Latter-day Saint exegetes that simultaneously wrest sacred writ from its historical and cultural moorings, lay claim to exclusive and univocally correct readings of those texts, and thus produce an incomplete and fragmented interpretation of those texts. Finally, by pursuing a contextual mode of interpretation, the reader comes away, for example in Lester Bush's article on the Word of Wisdom, with a better understanding, if not of the sacred text and its author, then at least of the spatial, temporal, and ideational terrain wherein the text appeared. But here the problems begin.

HISTORICAL-CRITICAL METHOD AND LOGIC

The contextual terrain of scripture may be sketched in and accounted for by historical inquiry to an astonishing degree, and still one may misinterpret the text. For example, Doctrine and Covenants 89 has not been dealt with (pace Bush) in its sensus plenior, "the plenitudinous sense of the entire text," when it is reduced to a code of health. In Bush's essay, an unnecessary level of background noise (i.e., early nineteenth-century American medical culture) has been dialed in at the expense of the internal relations of the text. This fact is evident by the essay's silence regarding the section's opening and closing sets of verses, the verses that constitute the very prerequisite for a more compelling interpretation of the text.

A majority of the writers of The Word of God have invested an unwarranted degree of confidence in the ability of the sitz-im-leben, the "life world," of the production of scripture, re-created by the historical-critical method, to enable a person to adequately and sufficiently read the text. Edward Ashment's assertion that historical methodology "faithfully portrays and interprets religious phenomena in their original setting" and "seeks to develop safeguards against imposing modern categories on ancient data" (251; italics added) invests the tentative findings of scholarly historical research with a burden of certitude his assertion cannot bear.

This ungarded enthusiasm for the historical-critical method leads numerous essayists to commit fallacies of genetic (or environmental) and post hoc ergo propter hoc reasoning. Citations of Unitarian controversies, deistic cosmologies, Quetzalcoatl, the Creed of Chalcedon, and the Protestant work ethic may provide for
some readers an imposing body of circumstantial evidence to
account for the environmental derivation of Latter-day Saint
scripture. But for the critical student, the arguments are not persuasive,
considering the lack of more concrete linkage and the eminent
possibility that a text “stands apart from its genesis” and contains
its own meaning. Nor is the attentive reader swayed by post-hoc
argumentation from temporal sequence to causal relations (if b
follows a, a is the cause of b); such logic appears to be a shortcut in
reasoning that we, as a scholarly community, are in too much haste
to commit. Just find an assumed temporal sequence—for example,
a fourth-century ecumenical confession or eighteenth-century
Christological formulation preceding Abinadi, Amulek, and
Ether—and Voilà! We’ve discovered the causal source for yet one
more Book of Mormon passage and added one more testimony to
Joseph Smith’s eclectic authorial genius.

The most egregious example of these fallacies is found in
Susan Curtis’s essay, wherein she contends, among other things,
that “exemplary characters in Smith’s Book of Mormon were
fundamentally market capitalists” driven by “assumptions about
hard work, regularity, commerce, and accumulation sustained by a
Victorian sensibility” (Curtis, 87). This assertion would be
incomprehensible were the reader not to extend the charity of
assuming that its author had only a superficial acquaintance with
the text (the reader might also suggest beginning to correct the
assessment by reading 3 Nephi 6:4–14). Before closing our minds
with pronouncements such as “paraphrase,” “influence,” “borrow-
ing,” and “eclecticism,” allow us to look seriously at the complex
language that is literature, at the text in its own terms, and at its
internal relationships.

A NECESSARY DIGRESSION

“For the record,” knowledge of the scholarly tools and
tentative findings of historical-critical, as well as literary-critical,
scriptural inquiry is a nonnegotiable prerequisite for students and
teachers who study scripture seriously, academically, worshipfully.
It is scandalous that we Latter-day Saints do so little to familiarize
students with this field of inquiry, no matter how well intentioned
our motives may be. Subsequently, students, teachers, and lay
people alike are left unprepared to deal thoughtfully with the
methods, arguments, and propositions of scriptural scholars (and
hacks) whose work dominates the academic fields and even popular
literature (for example, the yearly December issues of Time
magazine and U. S. News and World Report, which deal with
scriptural authorship and meanings). Our silence and our inelegant disdain only lead those entrusted to us in Sunday Schools, seminaries, and religion classes to seek out or passively receive “wisdom” from others who may be either ill-equipped in the field or unsympathetic to our most deeply felt beliefs.

Unfortunately, both the exhortation to employ historical-critical tools and their actual implementation suffer further in The Word of God from some authors’ inadequate familiarity with primary and secondary literature. Where arguing from historical data is so important, factual errors and superficial acquaintance with the temporal and ideational “career” of a subject undermine the persuasiveness of numerous essays. Limited space allows only a few examples.

It is difficult to respond to George D. Smith’s call to update Isaiah (113) when, contrary to his assertions, (a) the so-called Council at Jamnia (Javneh) may not only have decided nothing about the Hebrew canon, it may not have even taken place; 

(b) the “Jerusalem branch of the Church” was not destroyed by the Romans in 70 A.D. (113), rather, most of the community removed to the city of Pella in 66 A.D.; and (c) most “early Christians” were Jews and, hence, regarded marital “sexual gratification” in positive terms (even as a theurgical undertaking) and not “the work of Satan” (116). Furthermore, it is difficult to “update Isaiah” when the essayist has not engaged in serious argument with single-author proponents of Isaiah (Christian and Jewish) because he lacks the requisite linguistic and philological tools to do so.

Similarly, the reader has difficulty accepting Edward Ashment’s unqualified contention that the P strata in Genesis is “a late account” (242). Ashment begs the question of what is “a late account,” and he doesn’t seem to be conversant with the literary/critical hypothesis that posits just the opposite: “Granted the possibility of intertextuality . . . [the] J [strata] can be better appreciated by supposing a prevenient text, or body of texts”; P and/or E may have been “available as text to a midrashically imaginative revisionist [J].”

Ashment’s essay, “Making the Scriptures ‘Indeed One in Our Hands,’” indict tendentious and ill-informed Latter-day Saint scriptural interpretation. He points out the numerous difficulties of relying on the King James Version of the Bible as a textual source for scholarly, critical inquiry (and problems there are!) but fails to acknowledge that, minimally, the King James Bible “is still arguably the version that best preserves the literary effects of the original languages.” His argument suffers, furthermore, where he asserts, without qualification, that “there is no biblical basis for the
Mormon doctrine of Ante-mortal Existence” (238; italics added). Ashment may want to read the text of Genesis 1:26 and then examine its extraordinary career in Jewish midrashic literature. That literature wrestled seriously and imaginatively with the perplexing plural forms of address in the creation account, forms of address that assume a preexistent heavenly court or host. In addition, an interdisciplinary examination of the history of the Proverbs 8 text and its personification of a preexistent “Wisdom” may be similarly enlightening. The point is, there have been a number of Jews, and Christians, who felt that there was a biblical basis for positing and speculating about an antemortal existence.

Melodie Moench Charles and George A. Smith discount any belief in Judaism of substitutionary suffering (“no Jew expected his messiah to atone for anyone’s sins” [138]). This proposition is part of the argument which disengages Hebrew prophets from prescient gifts and defines prophets primarily as commentators of the contemporary scene. Setting the argument of foreknowledge aside, an example of vicarious suffering stands out in one readily available Jewish text, the martyrdom of Eleazar in 4 Maccabees 6:28–29: “Be merciful unto thy people, and let our punishment be a satisfaction in their behalf. Make my blood their purification, and take my soul to ransom their souls.”

Dan Vogel and Brent Metcalfe’s essay, though admirably researched and written, also suffers from the “genetic” fallacy. Because they focus on external cosmological debates from the seventeenth through early nineteenth centuries, the authors unfortunately bypass what the expectant reader anticipates: a discussion of the ancient and medieval concept of cosmology as a philosophical/theological science, of cosmology’s internal rationality (which might at least have helped Vogel and Metcalfe make some sense of “fixed,” “governing,” and “subordinate” celestial bodies), and of its eventual breakdown. Such an examination would have underlined the point that a function of the prophetic metaphysical (not literal and material, pace Vogel and Metcalfe) poetry of Doctrine and Covenants 88 is to reaffirm the divine source, nature, and goal of the cosmos.

In sum, the program of confronting and refining Latter-day Saint definitions of revelation and scripture pursued in The Word of God falls prey to the exactions of the very tools employed by its authors. On the one hand, the reader sorely misses a sense of circumspection, of measure, even of skepticism and an awareness of the tentative and provisional, that would, in more able hands, qualify dogmatic propositions about the context and interpretation of God’s word as mediated through his human agents. On the other
hand, historical scholarship expects a more profound familiarity and fluency with the history, "the career," of a text, and of its meaning on its own terms, than is manifested in this collection.

THEOLOGY

In view of the preceding observations, the critical reader, unfortunately, encounters numerous interpretive and theological problems in The Word of God. Geoffrey Spencer and William Russell's unimaginative description of the so-called scriptural literalism of the Latter-day Saint communities renders justice neither to the human complexity of those communities nor to the distinguished history and theological accomplishments of rabbinic, patristic, medieval, and early modern scriptural commentary and analysis. It would speak well for the maturity of our scholarship and the generosity of our souls if we were to recognize that for the great practitioners of traditional biblical hermeneutics "unlocking . . . the Bible's secret mystery was their enterprise, the very holiness of the text is what allowed them to let their imaginations roam . . . [and] to state radical or controversial ideas.""11

Similarly, imaginative and compelling accounts of revelation and of the authority of the Book of Mormon should offer us more than Spencer's misleading commonplace that "[revelation is] an event in our history which brings rationality and wholeness" (25) (it can bring just the opposite) and Russell's reductionist assertion that the book's authority "stems from containing the thought of the founding prophet just prior to the organization of the church" (51). Two non-Mormon descriptions of revelation and of Joseph Smith (Avery Dulles's Models of Revelation12 and Harold Bloom's The American Religion: Analysis and Prophecy13 respectively) display welcome levels of sophistication, critical acumen, and sympathetic scholarship that are lacking in the essays at hand.

In addition, in spite of Thomas's (73), Smith's (122), Charles's (135), and Ashment's (243) assertions to the contrary, there are Christologies (plural) in the Book of Mormon and in Mormonism. One essayist after another has conflated the speculations and mythic narratives of Abinadi, Amulek, Benjamin, and Ether and made them not only equivalent in weight to the extended statements ascribed to Jesus Christ about himself, his mission, and his relationship to the Father, but also superior to Christ's own self-proclamation. These preincarnational Christologies are not sufficient and compelling authorities to warrant the simple identification of Jesus Christ as the God of the Old Testament. In 3 Nephi, Jesus consistently portrays God the Father as the divine author and partner of Israel's covenant: "Ye are of the
covenant which the Father made with your fathers” (3 Ne. 20:25). Jesus tells the Nephites it is the Father who rewards, knows, forgives, sees, clothes, responds, gathers, and leads. The Son defers, prays, and is subordinate to his Father, the God of Israel. This role is the doctrine and work given by the Father to the Son (3 Ne. 11:31–32).

The theological persuasiveness of the essays is weakened by mistaken assertions (a) that the Jewish people have somehow been provisionally unchosen as God’s covenant people (124); (b) that we exhaust the definition of Redeemer in the Hebrew Bible with the terms kinsman, witness, or umpire (118, 239); (c) that prophetic foreknowledge is, in fact, only “anachronistic contamination” by later redactors and readers (40); and (d) that the scriptures’ normative and authoritative status derives principally from their role as initiator, “a common point for the beginning” of theological discourse (60). Actually, the scriptures’ normative status is derived from far more than just an agreed beginning for discourse.

Finally, this collection furthers (unwittingly?) a tendentious, “protestant” reading of the word of God in three ways: it draws the unwarranted conclusion that Latter-day Saint scriptures teach that the Mosaic law was only “an oppressive punishment imposed by an angry God” (135); it assumes that the solely authentic meaning of the text is prior to or given within it rather than connected, as two early links, in a complex chain of the text’s career or tradition; and it asserts that the “inspiration” of a scriptural passage “must always remain purely individualistic” (212).

CONCLUSION

In his essay, “Beyond Literalism,” William Russell makes an observation which begs a question and an answer: “Frequently the most liberal church members, while accepting biblical scholarship, nevertheless do not take it seriously” (49). Why that scholarship is not taken seriously by more Latter-day Saints is answered, in part, by the shortcomings of these essays. This reader looks to some future Signature Books imprint that will display the scholarly rigor and imaginative reading of history and theology sufficient to make a compelling case to modify the way we read the word of God.
